DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Freedman et al. in view of Fernandes et al.

Freedman et al. teaches a scheduler for a multiple computer system. Within the background of the invention Freedman et al. teaches a master-slave concept in which several computers are coordinated through a master control. The master designates which tasks are executed by the individual computers (operating a control processor to subdivide a bulk data set into subdivisions of data; operating the control processor to send the subdivisions of data to a plurality of processors connected to the control processors via network; and operating the processors of the plurality of terminals to process the data) (column 1; lines 38-44).

Freedman et al. further teaches a task selection on each computer is performed by a Scheduler on a priority basis. When a given computer needs to select a task (is substantially idle; claim 3) the computer scans the task status information. Examiner notes that this teaching is consistent with interrupting the data processing, if a computer needs to process a transaction that has higher priority (claim 5).

The system of Freedman et al. does not specifically teach that the network of terminals as point-of-sale terminals. Fernandes et al. teaches retail operations utilize a plurality of point-of-

sale terminals coupled to a central computer. It would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify the teachings of Freedman et al. by further specifying that the network of terminals be point-of-sale terminals, in order for retail operations to leverage their existing hardware when performing large computing tasks.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to James A. Kramer whose telephone number is (703) 305-5241. The examiner can normally be reached on Monday - Friday (8AM - 5PM).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Richard Chilcot can be reached on (703) 305-4716. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-1113.
